

SIMILE Project: Integrated Lake Water Quality Monitoring

Carlo A. Biraghi, Daniela Carrion, Maria A. Brovelli

*Departement of Civil and Environmental Engineering (DICA), Politecnico di
Milano*

Informative System for the Integrated Monitoring of Insubric Lakes and their Ecosystems

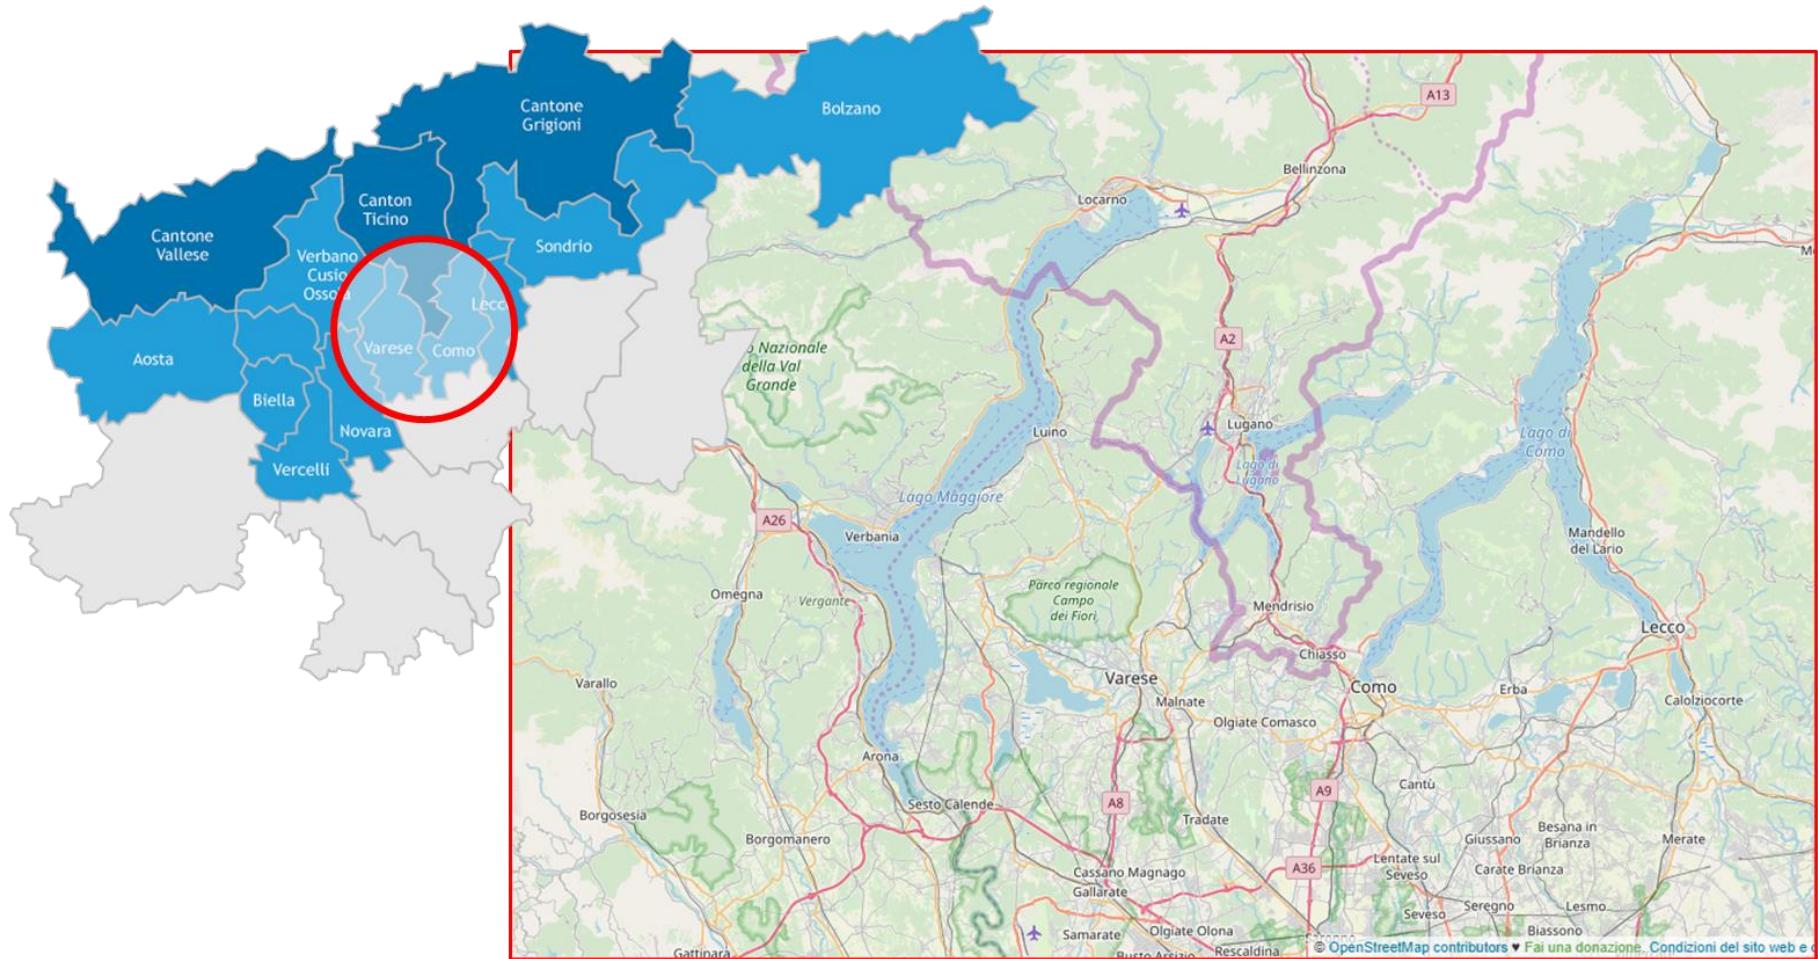

SIMILE

17 JANUARY 2019 – 16 JANUARY 2022

Axis 5 – Strengthening of cross-border governance

PROJECT LOCATION

PARTNERSHIP

ITALY

Politecnico di Milano (Polo Territoriale di Lecco)

Lombardy Region - D.G. Environment and Climate (with the collaboration of ARPA Lombardia)

CNR-IRSA Water Research Institute (Verbania-Pallanza)

Fondazione Politecnico di Milano

Collaboration: University of Pavia and CNR IREA MILANO

SWITZERLAND

Scuola Universitaria Professionale della Svizzera Italiana (SUPSI)

Canton Ticino – Environment Department

GOALS

Protection of water quality for Insubric lakes (Maggiore, Lugano, Como)
Improvement of lake idric resource evaluation and management capacity

STRATEGIES

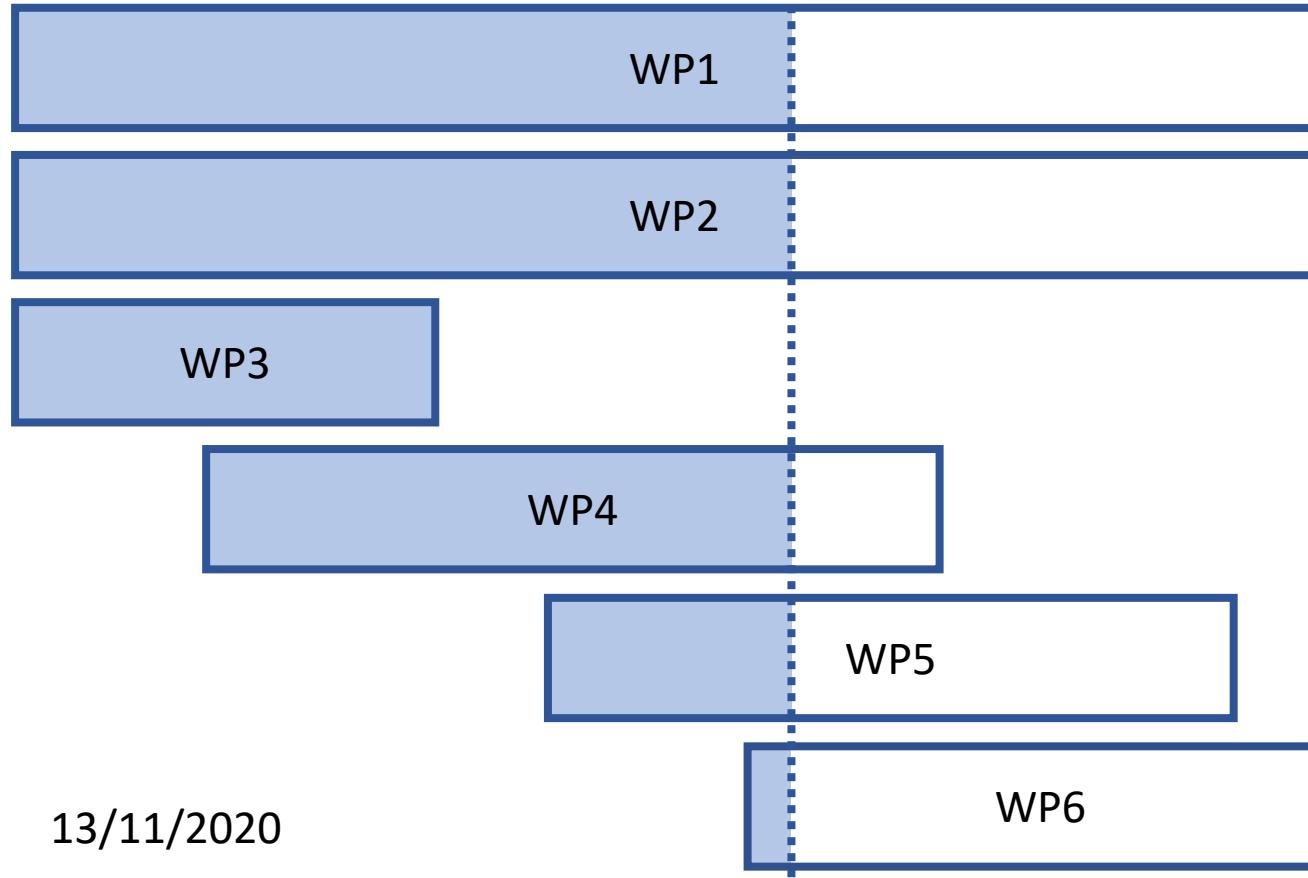

Coordination of existing monitoring systems with new data collection methods (HF Sensors, Satellite images, Citizen Science)

Increasing environmental awareness and promote legal and administrative cooperation between citizens and institutions

Cross-border operative agreement and policy-brief

PROGRESS

13/11/2020

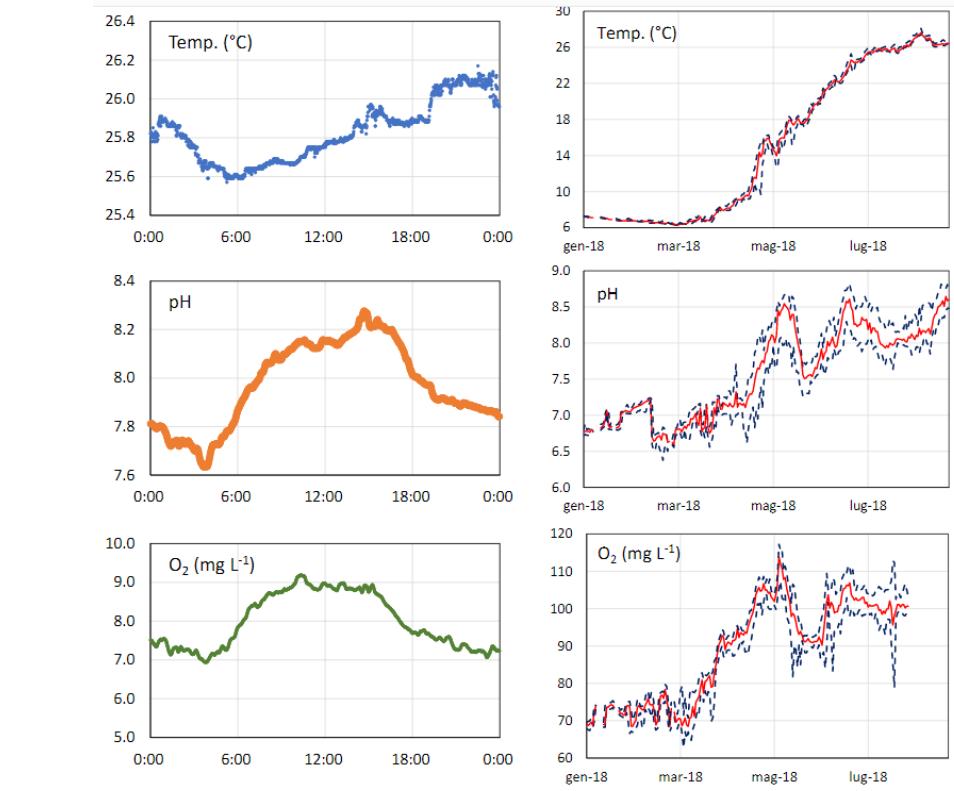

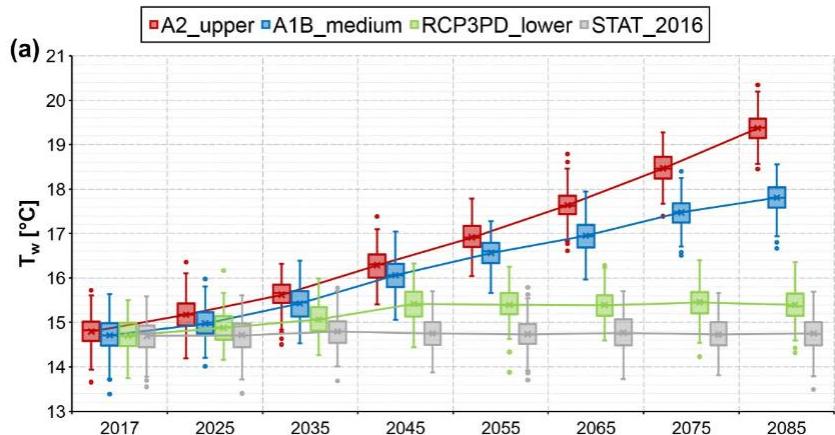

WP1 Coordination and management**WP2** Communication**WP3** Definition of an innovative approach for water quality management**WP4** Development of monitoring tools and methodologies**WP5** Development of a Business Intelligence platform**WP6** Guidelines definitions

WP3 INNOVATIVE APPROACH DEFINITION

State of the art of Insubric Lakes monitoring

Evaluation of needs and pressures (survey)

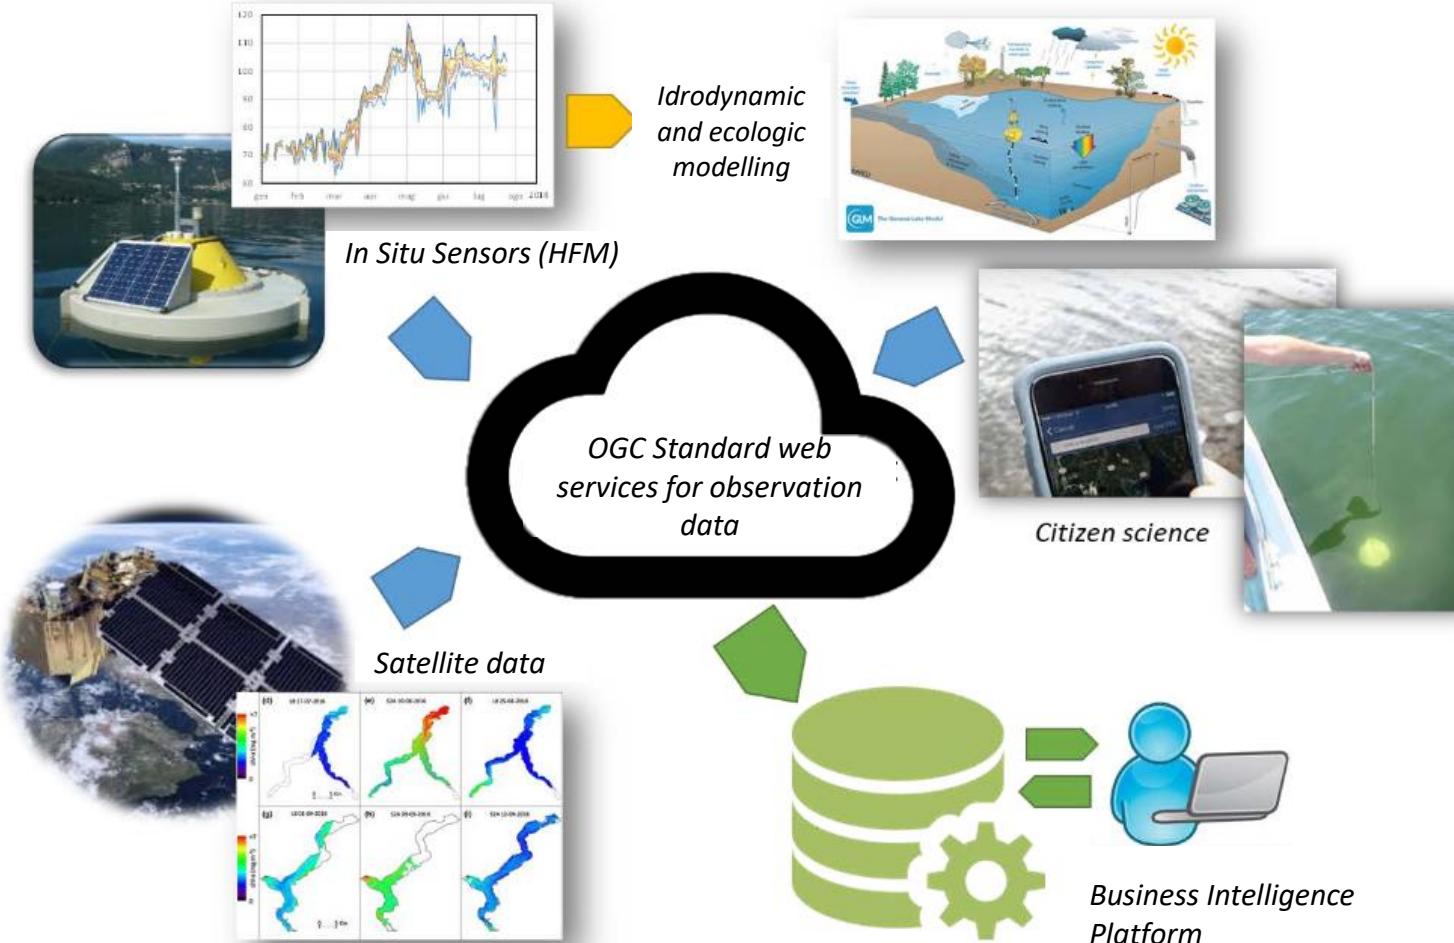

Design of the integrated monitoring system

Daily variations of water parameters

Temperature values for different climate scenarios

WP3 INNOVATIVE APPROACH DEFINITION

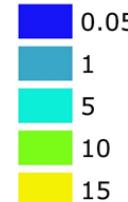

WP4 MONITORING METHODOLOGIES

In Situ

WP4 MONITORING METHODOLOGIES

Credit images: OpenStreetMap

WP4 PLATFORMS WITH SENSORS

- **Fixed buoy** for continuous and long-term monitoring.
Data collection for discrete monitoring integration,
modeling, sensor calibration and data control/validation
- **Movable buoys** for targeted campaigns (eg calibration
and satellite data integration) and to increase spatial
coverage
- Equipment: **basic sensors (Temp., PH, cond., O₂) +**
fluorimetric sensors + thermistor chain + weather station
- Powered by solar panels, data transmission via modem
or wi-fi, programmable sampling rates

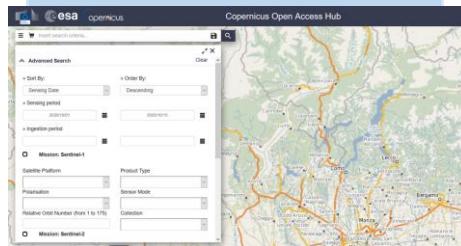

Example of platforms
position for Maggiore Lake

Bands 11

Spatial resolution 15 - 100 m

Temporal resolution 16 giorni

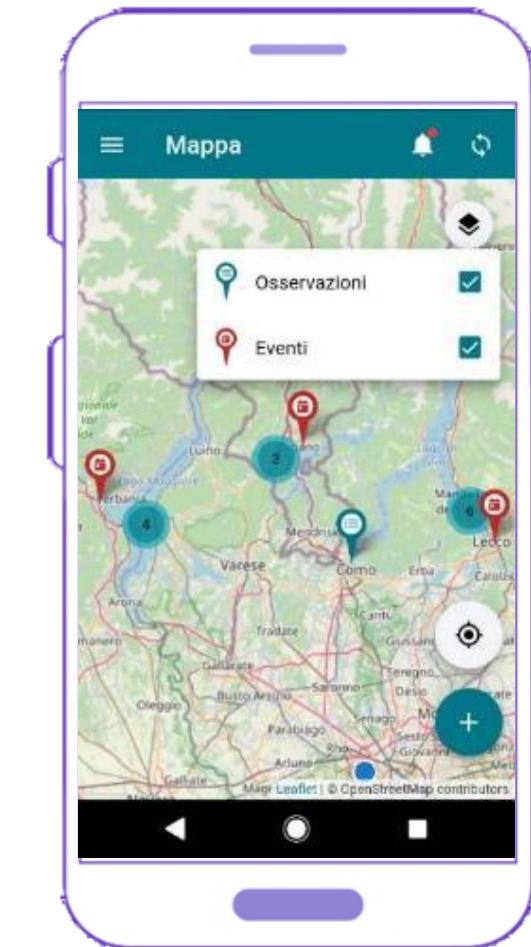

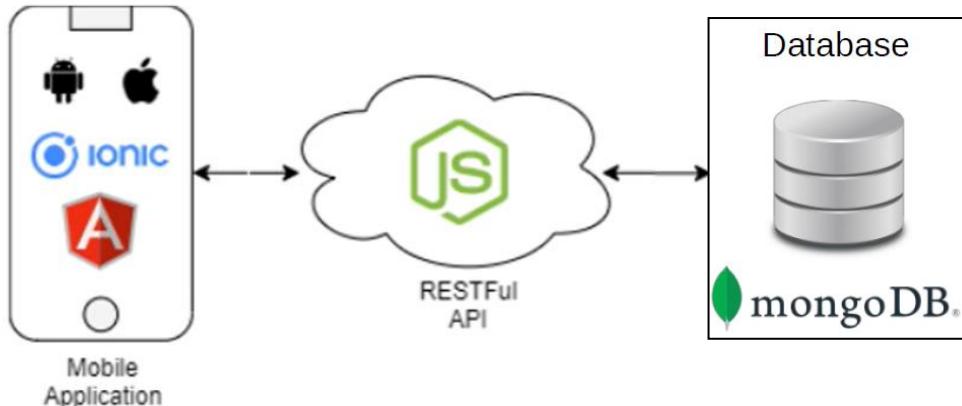

Active since 2013 - ...

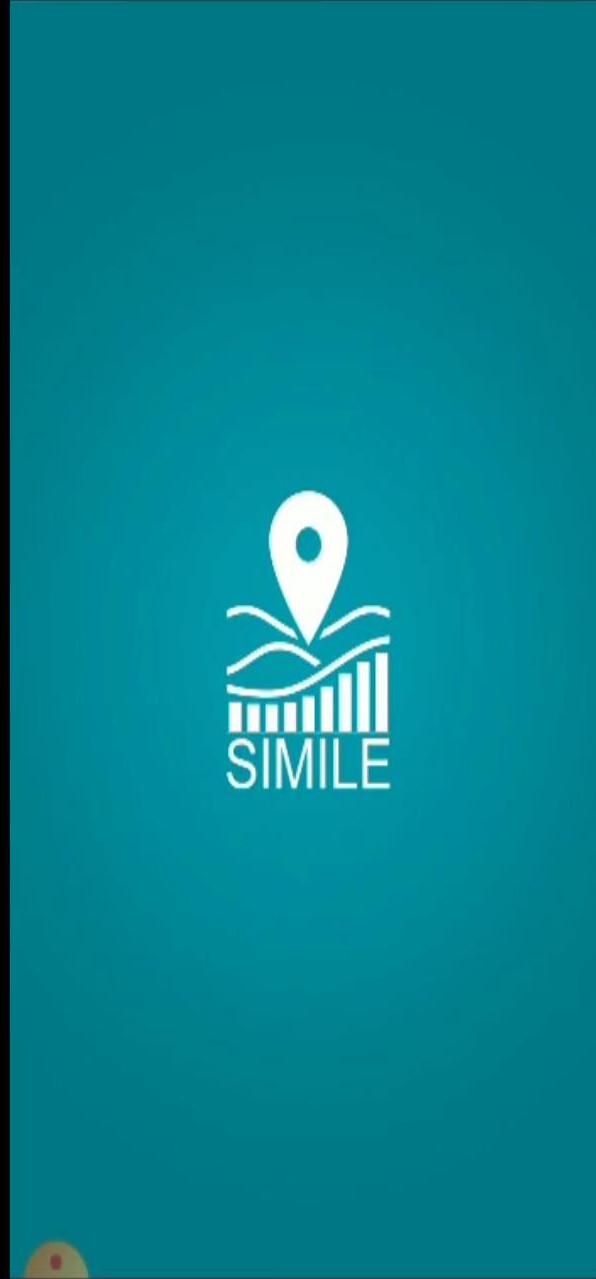

WP4 CITIZEN SCIENCE

WP4 CS MOBILE APPLICATION

- **Observations:** algal blooms, foams, oil stains, litters, drains, odours and fauna (alien species)
- **Measures:** transparency, temperature, pH, Oxygen, Bacteria
- **Events:** seminars, trainings, clean-up, mapathons, activities with the schools
- **Glossary:** increase awareness about the lake environment and the organisms that inhabit it
